PROFESSIONAL SUMMARY

AI-focused Software Engineer and Full Stack Developer with 1+ years of hands-on experience designing and deploying intelligent systems, scalable web platforms, and enterprise CRM solutions. Proven track record building production-grade AI applications powered by LLMs, autonomous agents, RAG pipelines, NLP, and computer vision. Deep expertise in full-stack development (React.js, Next.js, Node.js, FastAPI) and Salesforce (Apex, LWC, Sales Cloud, Agentforce). Demonstrated ability to deliver AI-driven products that automate workflows, increase operational efficiency, and drive measurable business outcomes. Strong engineering fundamentals with a product-first mindset and passion for scalable architecture.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, Dart, C, SQL | **Frontend:** React.js, Next.js, Tailwind CSS, Shadcn/UI, Flutter
Backend: Node.js, Express.js, FastAPI, REST APIs | **Databases:** MongoDB, PostgreSQL, Firebase, ChromaDB
AI / ML: LLM Integration, LangGraph, GPT-4o Vision API, AI Agents, RAG Pipelines, NLP, Computer Vision, Transformers, LSTM, Autoencoders, SHAP, Prompt Engineering
Salesforce: Apex, Lightning Web Components (LWC), SOQL, Salesforce Flow, Sales Cloud, Experience Cloud, Agentforce, Reports & Dashboards | **Tools:** Git, Socket.io, Authentication, API Integration

PROFESSIONAL EXPERIENCE

G10X | Associate Software Engineer

Kochi, India · Nov 2025 – Present

- Engineered an autonomous agentic workflow using LangGraph and GPT-4o Vision API to fully automate product returns and exchange resolution; reduced manual review time by eliminating human-in-the-loop for standard cases through AI-based decision trees and image analysis.
- Built SmartLead AI, a Salesforce CRM system with intelligent lead scoring, multi-criteria assignment routing, and automated follow-up sequences using Apex triggers, Flow automations, and Experience Cloud portals.
- Developed AuraShop, a full-stack AI e-commerce platform with a conversational shopping assistant, personalized recommendations, wallet system, and QR-based order pickup — built on Next.js, Node.js, and MongoDB.
- Implemented Expenze, a WhatsApp-integrated AI expense tracker processing natural-language voice and text inputs to categorize, log, and report personal finances through an automated NLP pipeline.
- Delivered GoTrip and Tripza, full-stack travel marketplace platforms with AI-assisted itinerary generation, real-time booking, and service provider management workflows.
- Implemented Salesforce Sales Cloud CRM with Lead Management, Opportunity Management, Web-to-Lead with reCAPTCHA, intelligent queue routing, and custom analytics dashboards for enterprise sales teams.
- Developed reusable LWC component libraries, Apex triggers, and declarative Flow automations accelerating delivery of CRM features across multiple client implementations.

WHITE MATRIX Software Solutions | AI Engineer Intern

India (Hybrid) · Mar 2024 – Mar 2025

- Designed and deployed Behavioral Insider Threat Detection System — a hybrid Transformer-LSTM-Autoencoder deep learning architecture for real-time cybersecurity anomaly detection with SHAP-powered explainability, achieving high-precision behavioral pattern classification on enterprise log datasets.
- Built SmartCrop, an AI agriculture platform combining GPT-4o Vision API and computer vision to diagnose plant health from images and generate voice-based conversational responses, enabling accessible precision agriculture for low-tech users.
- Developed AI Meeting Notes Tracker — an end-to-end NLP pipeline that transcribes, summarizes, and extracts action items from meeting audio, reducing manual note-taking overhead significantly.
- Engineered full-stack AI applications using React.js, Python, and FastAPI; designed scalable RESTful API architectures supporting concurrent AI inference workloads with low-latency response requirements.
- Built AI-powered recommendation and conversational systems integrating LLM APIs, RAG pipelines, and real-time data retrieval to personalize user experiences across multiple product surfaces.

PKJ International LLC | Web Developer Intern

Koratty, Kerala · Jan 2025 – Mar 2025

- Engineered responsive, high-performance frontend interfaces using React.js and modern CSS frameworks; optimized Core Web Vitals metrics through code-splitting, lazy loading, and component-level performance tuning.

- Built and integrated RESTful API endpoints; implemented reusable component libraries that improved development velocity and ensured UI consistency across business application surfaces.

ZIUIKE INFOTECH | Website Design & Development Intern

Thrissur, Kerala · Jul 2024 – Jan 2025

- Developed and deployed multiple MERN stack applications including a Resume Generator, Weather Forecasting App, and Expense Tracker — each featuring responsive UI, external API integrations, and data persistence layers.
- Built modular React.js component architectures with clean state management patterns; contributed to frontend optimization and production deployment pipelines.

SnagPro Inspector | Website Designer (Part-Time, Remote)

Remote · Sep 2024 – Oct 2024

- Designed and implemented mobile-first, responsive web interfaces; improved UX for client-facing inspection reporting pages, resulting in enhanced usability across devices.

KEY PROJECTS

SmartLead AI — Intelligent Lead Management CRM | Salesforce · Apex · LWC · SOQL · Salesforce Flow · Experience Cloud · Agentforce

- Engineered an end-to-end AI-powered Salesforce CRM with a custom multi-factor lead scoring engine built in Apex, evaluating 10+ behavioral and demographic signals to rank and route inbound leads to the correct sales queues automatically.
- Developed Lightning Web Components for a real-time lead intelligence dashboard surfacing conversion probabilities, activity timelines, and follow-up recommendations — replacing manual pipeline reviews.
- Automated the full lead lifecycle using Salesforce Flow: Web-to-Lead ingestion with reCAPTCHA validation, round-robin queue assignment, SLA-based escalation triggers, and drip follow-up sequences without code.
- Integrated Agentforce AI for conversational lead qualification inside Experience Cloud portals; built custom SOQL-driven reports and dashboards providing sales managers live visibility into pipeline health and rep performance.

Autonomous Returns & Exchange Resolution Agent | LangGraph · GPT-4o Vision API · Python · FastAPI · PostgreSQL · React.js

- Designed a multi-step agentic workflow using LangGraph state machines where autonomous AI nodes handle image intake, damage classification via GPT-4o Vision API, policy rule evaluation, resolution decision, and customer notification — fully replacing a human support queue for standard cases.
- Built a vision-grounded damage assessment pipeline: user-uploaded product images are analyzed by GPT-4o Vision, structured defect data is extracted via prompt chaining, and matched against a PostgreSQL-backed policy engine to issue instant approvals, exchanges, or escalations.
- Implemented a FastAPI backend with async task queuing, persistent agent state management, and a React.js operator dashboard for exception review — achieving sub-3-second end-to-end resolution for 80%+ of cases.

AuraShop — AI-Powered E-Commerce Platform | Next.js · Node.js · MongoDB · GPT-4o · RAG · Tailwind CSS · JWT · Stripe

- Architected a full-stack e-commerce platform on Next.js 14 with App Router, server-side rendering, and dynamic product pages; backend powered by Node.js/Express with JWT authentication, role-based access control, and a MongoDB document store.
- Built a conversational AI shopping assistant using GPT-4o with a RAG pipeline backed by ChromaDB vector embeddings — enabling semantic product search, natural-language filtering, and context-aware recommendations across thousands of SKUs.
- Implemented an in-platform wallet system, QR-code-based order pickup flow, real-time order tracking via WebSocket events, and Stripe payment integration for a seamless end-to-end purchase experience.

Behavioral Insider Threat Detection System | Python · PyTorch · Transformers · LSTM · Autoencoder · SHAP · FastAPI · React.js

- Designed a novel hybrid deep learning architecture combining a Transformer encoder (for long-range behavioral sequence modeling), a bidirectional LSTM (for temporal pattern extraction), and a reconstruction Autoencoder (for unsupervised anomaly scoring) to detect insider threats in enterprise user activity logs.
- Trained on the CERT Insider Threat Dataset; applied SHAP (SHapley Additive exPlanations) to generate per-prediction feature attribution, enabling security analysts to understand which behavioral signals triggered each alert.
- Served the model via a FastAPI inference API with a React.js analyst dashboard displaying real-time risk timelines, anomaly heatmaps, and SHAP waterfall charts — making the system auditable and production-deployable.

SmartCrop — AI-Based Plant Communication System | Python · GPT-4o Vision API · FastAPI · React.js · Web Speech API · TailwindCSS

- Built a precision agriculture platform where farmers photograph crops and receive AI-generated voice responses diagnosing plant health, identifying disease patterns, and recommending treatments — bridging the gap between advanced AI and low-literacy users.
- Designed a vision pipeline using GPT-4o Vision API for multi-class plant disease classification; responses are synthesized to natural speech via Web Speech API and localized for regional agricultural contexts through prompt engineering.
- Architected a FastAPI backend with image preprocessing (resize, normalize, format conversion) before LLM submission, reducing token cost by ~40% while maintaining diagnostic accuracy.

BlinkGrid — Real-Time Multiplayer Reaction Game | Node.js · Socket.io · React.js · MongoDB · Express.js · TailwindCSS

- Engineered a low-latency multiplayer gaming platform using Socket.io with server-authoritative game logic — all game state, collision detection, and scoring computed server-side to prevent client-side cheating and ensure consistency across players.
- Implemented AI bot players with configurable difficulty curves using probabilistic reaction timing models; built room management, real-time leaderboards, and matchmaking using Node.js event-driven concurrency handling 50+ concurrent game sessions.

Expenze — WhatsApp AI Expense Tracker | Python · Twilio WhatsApp API · GPT-4o · FastAPI · PostgreSQL · NLP

- Built a zero-UI personal finance tool that parses free-form WhatsApp voice and text messages (e.g. 'spent 450 on lunch') using GPT-4o NLP to extract amount, category, merchant, and date — storing structured records in PostgreSQL with zero manual data entry.
- Integrated Twilio WhatsApp API for bidirectional messaging; implemented weekly/monthly summary generation, category breakdowns, and anomaly alerts delivered back as WhatsApp messages — making financial tracking frictionless and accessible.

EDUCATION

Christ College of Engineering

Kerala, India. 2021-2025

Bachelor of Technology in Computer Science & Engineering · CGPA: 8.23 / 10

CERTIFICATIONS & ACHIEVEMENTS

- Salesforce Development Training — Apex, LWC, Sales Cloud, Flow Automation
- Full Stack Development Certification — MERN Stack, REST APIs, Cloud Deployment
- AI & Machine Learning Certification — NLP, Computer Vision, Deep Learning, LLM Integration
- Built 15+ production-grade AI and full-stack projects spanning web platforms, CRM systems, autonomous agents, and intelligent automation across enterprise and consumer domains.
